

PORTABLE & SELF-CONTAINED

MiniPak Dust Suppression System

The MiniPak dust suppression system is a self-contained dust suppression unit that requires no electricity to operate and is driven using source water pressure.

The system allows personnel to apply non-hazardous, non-toxic, and biodegradable agents wherever dust suppression is needed at the facility, whether in the load zone or by a haul road. Extremely useful at fixed locations like conveyor belts, moving operations, or construction vehicles that generate a significant amount of dust.

FEATURES & BENEFITS

- One-person operation
- No power supply necessary
- Self-enclosed, portable unit; easily transportable
- Easy to install and operate
- Uses Benetech's non-corrosive, non-toxic, non-hazardous dust suppression agents
- Harmless to skin

**NO
Electricity
Needed**

Benetech Chemicals

Benetech has a selection of dust suppression chemicals for all types of bulk material needs. Our cost-effective chemicals are formulated to reduce dust levels with PRB, lignite, gravel, wood chips, scrap metal recycling, taconite, biomass, petroleum and metallurgical coke, iron ore, sinter, clinker, and other materials.

CHEMICAL FEATURES & BENEFITS

- Requires less equipment at fewer application points
- Cost-competitive agent
- Minimizes water addition
- Guaranteed to reduce airborne dust
- Environmentally-safe
